

QUICKJACK™

BL-3500SLX

PORTABLE CAR LIFT SYSTEM

The 3,500-lb. capacity BL-3500SLX portable car lift is perfect for small-wheelbase vehicles. As the lightest model in our lineup, its frames are easy to transport in and out of the garage or wherever else you need to work. Have fun wrenching at home, and shave off seconds at the track. Great for Miatas and other small wheelbase vehicles!

Perfect for the track

Convert your garage lift to a portable car lift just by rolling it to the truck of your car and hauling it to the track. 12V DC power option makes this the world's first-ever true track lift. If you don't have a professional pit crew at your disposal, you'll want QuickJack by your side.

Extended block trays

We increased the size of our rubber block trays to improve access to varied lift points. Position blocks from 26.75" - 50.5" apart, satisfying most lift point spreads.

Zero-leak fittings

Our car lift components include flush-face hose fittings to ensure fluids stay in the unit and not on your garage floor. You don't want to be the one to leak all over the track, either.

Open-center design

Don't let us get in your way! Inspired by larger frame-engaging car lifts, our open-center design gives users total access to the wheels and undercarriage.
